NAME

bioradtopgm - convert a Biorad confocal file into a PGM image

SYNOPSIS

bioradtopgm [**-image#**] [*imagedata*]

DESCRIPTION

This program is part of Netpbm.

bioradtopgm reads a Biorad confocal file as input and produces a PGM image as output. If the resulting image is upside down, run it through **pamflip -tb**.

OPTIONS

-image#A Biorad image file may contain more than one image. With this option, you can specify which image to extract (only one at a time). The first image in the file has number zero. If no image number is supplied, only information about the image size and the number of images in the input is printed out. No output is produced.
