NAME

gemtopnm - convert a GEM .img file into a PNM image

SYNOPSIS

gemtopnm [**-d**] [*gemfile*]

DESCRIPTION

This program is part of Netpbm.

gemtopnm reads a GEM .img file, either the one plane (black/white) or four plane (16 color) varieety, as input and produces a PBM or PPM file as output, depending on whether the input is one or four plane.

The input file is *gemfile* if you specify that argument, or Standard Input otherwise. Output is to Standard Output.

OPTIONS

-d Produce output describing the contents of the .img file.
