NAME

hdifftopam - convert horizontal difference image to original PAM image

SYNOPSIS

hdifftopam[*pamfile*] [**-pnm**] [**-verbose**]

Minimum unique abbreviation of option is acceptable. You may use double hyphens instead of single hyphen to denote options. You may use white space in place of the equals sign to separate an option name from its value.

DESCRIPTION

This program is part of Netpbm.

hdifftopam undoes what **pamtohdiff** does.

OPTIONS

-pnm This option tells **hdifftopam** to create a PNM image (i.e. PGM or PPM). Without it, **hdifftopam** creates a PAM image (with a tuple type of "unhdiff"). If the PAM does not have the proper depth to be a PGM or PPM (i.e. 1 or 3) and you specify **-pnm**, **hdifftopam** fails.
