## NAME

pbmto10x - convert a PBM image into Gemini 10X printer graphics

## SYNOPSIS

**pbmto10x** [**-h**] [*pbmfile*]

## DESCRIPTION

This program is part of Netpbm.

**pbmto10x** reads a PBM image as input and produces a file of Gemini 10X printer graphics as output. The 10x's printer codes are alleged to be similar to the Epson codes.

Note that there is no 10xtopbm tool - this transformation is one way.

## OPTIONS

The resolution is normally 60H by 72V. If you specify the **-h** option, resolution is 120H by 144V. You may find it useful to rotate landscape images before printing.
