Table Of Contents

NAME

pnmcut - cut a rectangle out of a PBM, PGM, or PPM image

SYNOPSIS

pnmcut [**-left** *leftcol*] [**-right** *rightcol*] [**-top** *toprow*] [**-bottom** *bottomrow*] [**-width** *width*] [**-height** *height*] [**-pad**] [**-verbose**] [*left top width height*] [*pnmfile*]

Minimum unique abbreviation of option is acceptable. You may use double hyphens instead of single hyphen to denote options. You may use white space in place of the equals sign to separate an option name from its value.

DESCRIPTION

This program is part of Netpbm.

pnmcut was obsoleted by **pamcut**, introduced with Netpbm 9.20 (May 2001). **pamcut** is backward compatible with **pnmcut**, plus adds many additional functions, including the ability to process PAM images.

pnmcut remains in the Netpbm package because it probably has fewer bugs for now than **pamcut**. Some day, **pnmcut** will probably become an alias for **pamcut**.

You can use the **pamcut** documentation for **pnmcut**, as long as you avoid any function which it says was added after Netpbm 9.20.
