NAME

pnminvert - invert a PNM image

SYNOPSIS

pnminvert [*pnmfile*]

DESCRIPTION

This program is part of Netpbm.

pnminvert reads a PNM image as input, inverts it black for white, and produces a PNM image as output.

If the image is grayscale, **pnminvert** replaces a pixel with one of complementary brightness, i.e. if the original pixel has gamma-adjusted gray value G, the output pixel has gray value maxval - G.

If the image is color, **pnminvert** inverts each individual RGB component the same as for a grayscale image.
