NAME

pbmtopsg3 - convert PBM images to Postscript with G3 fax compression

SYNOPSIS

pbmtopsg3 [**--title=***title*] [**--dpi=***dpi*] [*filespec*]

DESCRIPTION

This program is part of Netpbm.

pbmtopsg3 converts the PBM images in the input PBM file to pages in a Postscript file encoded with G3 fax compression.

If you don't specify *filespec*, the input is from Standard Input.

Remember that you can create a multi-image PBM file simply by concatenating single-image PBM files, so if each page is in a different file, you might do:

cat faxpage* | pbmtopsg3 >fax.ps

OPTIONS

-title The Postscript title value. Default is no title.

-dpi The resolution of the Postscript output. Default is 72 dpi.
