NAME

pnmarith - perform arithmetic on two PNM images

DESCRIPTION

This program is part of Netpbm.

Starting with Netpbm 10.3, **pnmarith** is obsolete. Use **pamarith** instead. **pamarith** is backward compatible with **pnmarith** except where your input images have different depths. **pnmarith** would convert the one with the lesser depth to have the higher depth before doing the arithmetic. With **pamarith**, you must do that step separately, using **pgmtoppm**.
