NAME

pnmmargin - add a border to a PNM image

SYNOPSIS

pnmmargin [**-white**|**-black**|**-color** *colorspec*] *size* [*pnmfile*]

DESCRIPTION

This program is part of Netpbm.

pnmmargin adds a border around a PNM image.

OPTIONS

You can specify the border color with the **-white**, **-black**, and **-color** options. If no color is specified, the program makes a guess.

To remove a border of a specified size from an image, use **pamcut**. **pnmcrop** also removes borders, but determines by itself what is border and what is subject.

For lower level control, including to add different size borders to different sides of the image, look at **pnmcat**.

If all you're trying to do is get the image up to a certain required size, **pamcut** may be what you want.
