NAME

pnmtorast - convert a PPM into a Sun rasterfile

SYNOPSIS

pnmtorast [**-standard**|**-rle**] [*pnmfile*]

DESCRIPTION

This program is part of Netpbm.

pnmtorastreads a portable pixmap as input and produces a Sun rasterfile as output.

Color values in Sun rasterfiles are eight bits wide, so **pnmtorast** will automatically scale colors to have a maxval of 255. An extra **pamdepth** step is not necessary.

OPTIONS

The **-standard** option forces the result to be in RT_STANDARD form; the **-rle** option, RT_BYTE_ENCODED, which is smaller but, well, less standard. The default is **-rle**.

All options can be abbreviated to their shortest unique prefix.
