Rlatopam User Manual

RLATOPAM

Updated: 13 January 2006
Table Of Contents

NAME

rlatopam - convert Alias/Wavefront RLA and RPF image files to PAM image files.

SYNOPSIS

rlatopam [*rlafile*]

DESCRIPTION

This program is part of Netpbm.

rlatopam converts an Alias RLA (run-length encoded type A) or RPF (rich pixel format) image to a PAM image file. The output PAM file can be grayscale or RGB, with or without an alpha channel.

rlafile is the file name of the input file. If you omit this parameter, **rlatopam** reads the image from Standard Input.

There is no program in Netpbm that converts the other direction.x
