Vidtoppm User Manual

vidtoppm

Updated: 2000

NAME

vidtopppm - archived but not working

DESCRIPTION

This program is part of Netpbm.

vidtoppm is supposed to convert Parallax XVideo JPEG to sequence of PPM files. It's source code is part of the Netpbm package for archival purposes, but it does not presently build because it requires header files that aren't in the package. If someone comes up with a use for **vidtoppm**, we might be able to make it work. **vidtoppm** was in the Berkeley MPEG encoder package from which Netpbm's **ppmtompeg** was derived.
